

# Face Shield - DIY

# Things needed

1. Cardboard boxes (I used Amazon packaging boxes)
2. Transparent A4 sheet
3. Elastic band
4. Stapler
5. Paper Cutter

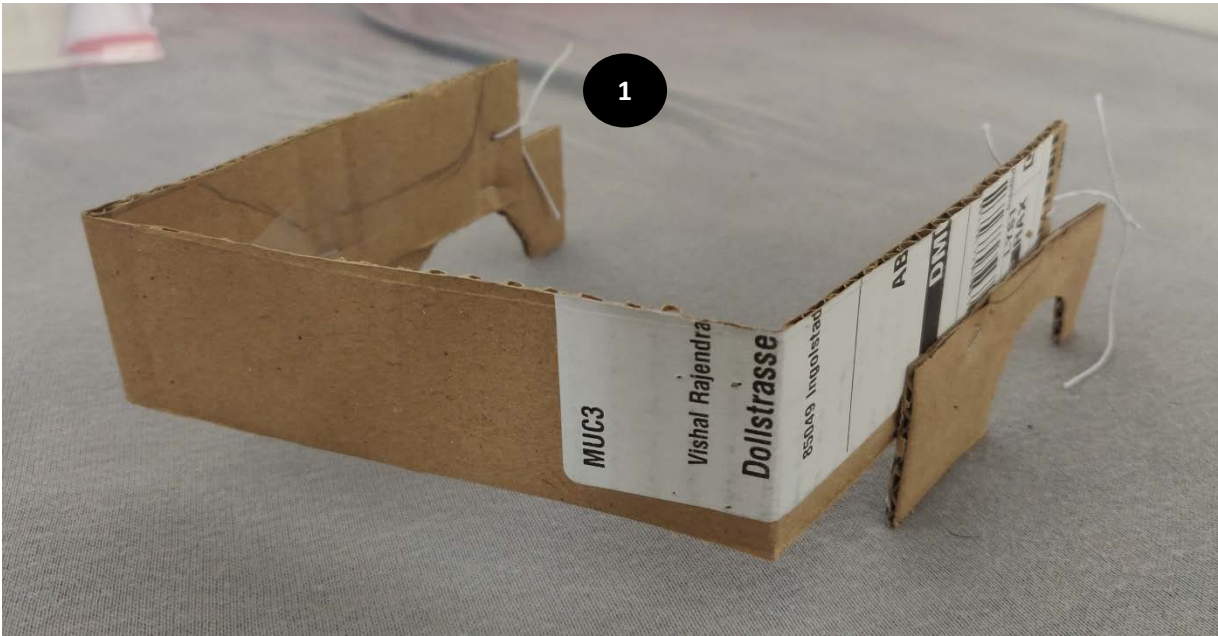

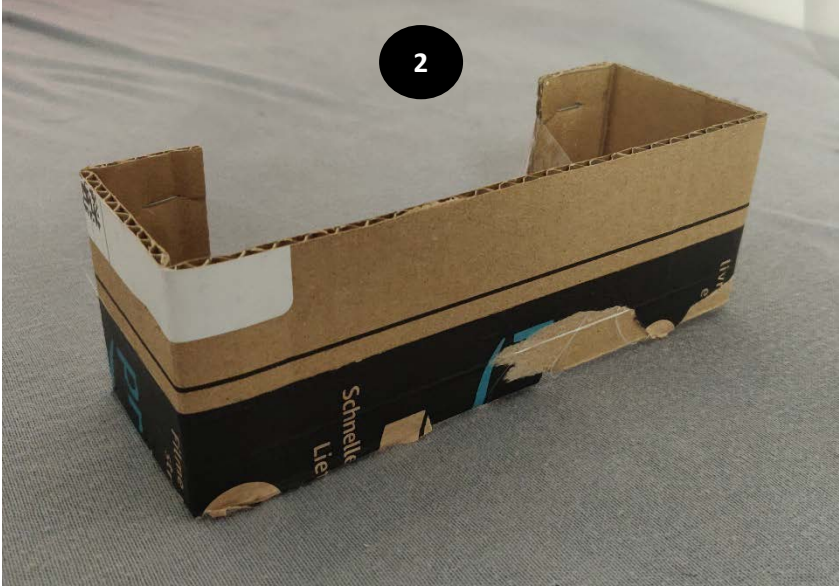

# Template

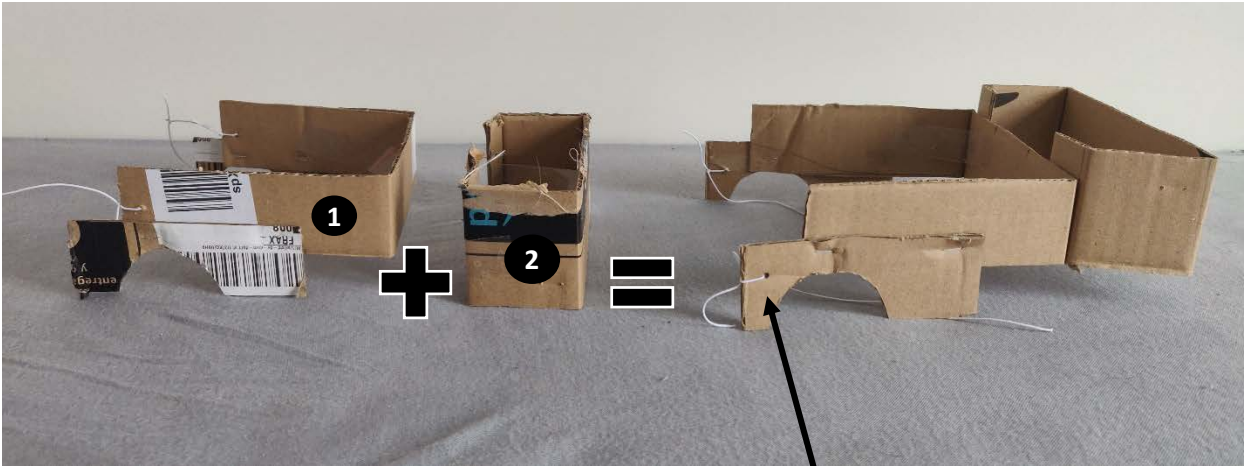

# Instructions

1. Take a cardboard box out of which you can make 2 strips of dimensions ①45 x 4cms, and ②30 x 6 cms each. (Here 1 and 2 refer to the strips (black circles) as seen in the template.
2. Take your spectacles or cooler shades and roughly mark the dimensions of the temples. You can integrate the ③A to the cardboard strip ① if your cardboard strip is long enough.
3. Roughly cut half circles as shown by the dotted red lines.
4. Now mark the crease lines (—) on the cardboard following the dimensions as shown in the templates. The dimensions are relative and can be adjusted to your choice.
5. Now along the crease lines in the direction shown by the yellow arrows (↷), fold the cardboard strips by 90 degrees.
6. Once everything is folded, use a stapler and staple the different parts following the black dotted lines.
7. Staple the transparent sheet to ②, you can add additional strip ④ for reinforcement if your transparent sheet is too thin and flimsy.
8. Finally attach two elastic bands by punching holes at suitable locations on both sides of stem
